

Company: Smith-Comeskey Ground Water Science (Ground Water Science) has been providing scientific and training services in hydrogeology and well and drain technology, maintenance and rehabilitation since 1986 (initially as S.A. Smith Consulting Services). Ground Water Science command of rock and glacial hydrogeology is second to none regionally, and our expertise in ground water system biofouling, maintenance, and rehabilitation is recognized and sought out across North America and beyond, working on some of the nation's biggest ground water projects.

Company Principals: The partners, Stuart Smith and Allen Comeskey, are certified and licensed geologists and ground water professionals with advanced degrees. Each has over 30 years of varied, quality, and highly hands-on professional experience. They offer an integrated understanding of hydrogeologic, biogeochemical, and well performance issues. They have contributed to several landmark drilling, well construction, biofouling analysis and well rehabilitation publications.

Professional Services:

- Hydrogeologic field testing, analysis, and modeling – experienced in complex settings.
- Environmental (biofouling and biocorrosion) microbiology and geochemical testing.
- Drilling and well construction and well rehabilitation specifications, supervision, testing and documentation – with capability to turn-key.
- Forensic analysis and troubleshooting for biofouling and biocorrosion of ground water and pressure relief system problems and microbiological well contamination.
- Ground water system and pressure relief system maintenance planning, training, and implementation.

Company Designations:

Cage code: 1WRP2
Dun & Bradstreet no. 794593327
EIN 31-1496202
Corporate status: Small business (21-B2)
Limited liability company
ORCA Registration: Complete

NAICS Codes:

541690 – Other scientific & technical consulting services
541712 – R&D physical, engineering, life sciences
541990 – Other professional, technical & scientific services
611430 – Prof. & mgmt. development training
541330 – Engineering services
541360 – Geophysical surveying and mapping

PSC Codes:

AJ32 – R&D Environmental Science
AJ34 – Environmental Science Engr. Development
AJ42 – Engineering, Applied & Exploratory
AJ52 – Life Sciences, Applied & Exploratory
B504 – Chemical/Biological Studies
B517 – Geological Studies
B518 – Geophysical Studies
B533 – Water Quality Studies
F015 – Well Drilling/Exploratory Services
F103 – Water Quality Support Services
H999 – Misc. Inspection and Testing Services

SIN Codes:

899-1 – Environmental planning services
899-2 – Environmental compliance
899-3 – Environmental occupational training services

Selected Clients and Accomplishments:

- Bureau of Reclamation Technical Services Center. Biofouling analysis, research, and comprehensive maintenance planning for large wellfields and dam pressure relief systems.
- National Ground Water Association: Training, research, and manual production.
- Hull & Associates, Greeley & Hansen; Fanning/Howey; GEO Consultants; Earth Tech; Weston, CH2M Hill, and numerous industry and municipal clients: Hydrogeology; well construction planning, inspection and testing; forensic environmental microbiology; ground water system maintenance and rehabilitation – solving serious water production and system performance problems.
- AWWA Research Foundation: Landmark biofouling and well maintenance and rehabilitation research.
- U.S. Army Corps of Engineers Omaha District: Wellfield maintenance guidance manual.
- Federal Highway Administration, Borehole Sealing Research Project contractor.
